Art Unit: 1632

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- Claims 1-26 and 29-31, drawn to a targeting vector, a method of producing cells comprising a modification of a target gene, a method of identifying cells comprising a disruption or modification of a target gene, a method of enriching for cells comprising a disruption or modification of a target gene, an isolated host cell comprising a modification or disruption of a target gene, a method of modifying or disrupting the function of a target DNA sequence, and a method of producing a targeting vector, classified in classes 435, 435, 435, 435, and 435, subclasses 455, 325, 6, 320.1, and 325.
- II. Claims 27-28, drawn to a method of producing a transgenic animal having a genome comprising a modification or disruption of a target gene and a transgenic animal comprising a modification or disruption of a target gene within the genome of the transgenic animal, classified in classes 800, 800, and 800, subclasses 21, 25 and 13.

There are many claims that are improperly dependent. See for example, claim 21 (which, for the purpose of the instant restriction requirement, is interpreted to depend from claim 20), claim 23 (which, for the purpose of the instant restriction

Art Unit: 1632

requirement, is interpreted to depend from claim 22), and claim 24 (which, for the purpose of the instant restriction requirement, is interpreted to depend from claim 22). In addition, claim 32 is incorrectly numbered. Claim 32 should actually be numbered as claim 31; the Examiner has corrected the numbering by Rule 1.126.

Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the targeting vector of Group I can be used to create an isolated cell comprising a disruption in a target gene, which can be used for screening agents *in vitro* while the method of producing a transgenic animal requires additional steps not required for producing the *in vitro* cell. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter and different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Application/Control Number: 09/954,483

Art Unit: 1632

Any inquiry concerning this communication or earlier communications from the examiner(s) should be directed to Peter Paras, Jr., whose telephone number is 703-308-8340. The examiner can normally be reached Monday-Friday from 8:30 to 4:30 (Eastern time).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Deborah Reynolds, can be reached at 703-305-4051. Papers related to this application may be submitted by facsimile transmission. Papers should be faxed via the PTO Fax Center located in Crystal Mall 1. The faxing of such papers must conform with the notice published in the Official Gazette, 1096 OG 30 (November 15, 1989). The CM1 Fax Center numbers are (703) 308-4242 and (703) 305-3014.

Inquiries of a general nature or relating to the status of the application should be directed to Dianiece Jacobs whose telephone number is (703) 305-3388.
